Symposium Proceedings
Assessment in Science Teaching and Learning

September 28, 2006
The University of Sydney
UniServe Science

**UniServe Science** aims to enhance the quality of university science teaching in Australia by collecting, maintaining and disseminating information on up-to-date and innovative teaching. To this end UniServe Science provides support at both an international and national level. Internationally, UniServe Science publishes *CAL-laborate*, an international journal, prepared in collaboration with the Higher Education Academy in the United Kingdom. *CAL-laborate* is available online at [http://science.uniserve.edu.au/pubs/callab/](http://science.uniserve.edu.au/pubs/callab/). From 2007 *CAL-laborate* will become a refereed journal. Nationally, UniServe Science conducts an annual conference which focuses on the enhancement of tertiary science teaching and learning.

The annual conference now consists of three components: a Science Discipline Day, held for interested parties to come together and discuss issues of common interest; the First Year Experience Discussion Forum; and the Tertiary Science Teaching Symposium. The First Year Experience Forum concentrated on issues to do with laboratory teaching and whether we can sustain this mode in a climate of reduced resources. Notes from the FYE forums are available online from [http://science.uniserve.edu.au/disc/fye.html](http://science.uniserve.edu.au/disc/fye.html).

The Pearson Education UniServe Science Teaching Award, which is presented at the annual Symposium, recognises teaching that improves student learning outcomes via the innovative and integrated use of information technology.

Papers for the 2006 Symposium, ‘Assessment in Science Teaching and Learning’ have been reviewed to meet the Department of Education, Science and Training standard for research conference publications.

The full papers were peer reviewed by at least two members of a national review panel that was chaired by Associate Professor Ian Johnston, Director, UniServe Science. For those papers deemed to be worthy of refereed publication, authors were provided with feedback from the reviewers and asked to make appropriate changes.

---

**UniServe Science PERSONNEL**

**Directors:** Associate Professor Ian Johnston, Associate Professor Mary Peat

**Deputy Director:** Associate Professor Robert G. Hewitt

**Educational Technologists:**
Kaye Placing

Table of Contents

Keynote Speaker
Diagnostic assessment in science as a means for improving teaching, learning and retention ............................................... 1
   David F. Treagust, Curtin University of Technology

Pearson Education Science Teaching Award Invited Paper
*Integrated Case-based Applied Pathology (ICAP): a model for learning and teaching of Veterinary Pathology ...... 10
   Katrina Bosward, Gerard Marcus, Federico Costa and Mark Krockenberger, The University of Sydney

Symposium Presentations
*A preliminary study on how accuracy relates to student self reports of confidence on a conceptual physics test ...... 16
   James Bewes and Manjula D. Sharma, The University of Sydney

Rethinking practical assessment in first year Biology .......................................................................................... 21
   Fiona Bird, La Trobe University

*Diagnostic tests in a first year Mathematics subject .................................................................................. 24
   Georgina Carmody, Stephen Godfrey and Leigh Wood, University of Technology, Sydney

*Multiple choice questions to combat plagiarism and encourage conceptual learning ............................................. 31
   Gareth Denyer and Dale Hancock, The University of Sydney

*Integrating assessment and feedback to overcome barriers to learning at the passive/active interface in
   mathematics courses .......................................................................................................................... 37
   David Easdown, The University of Sydney

*The role of formative feedback in improving group work outcomes ............................................................. 43
   Mark Freeman, Diane Hutchinson and Lesley Treleaven, The University of Sydney

*The case for assessable in-class team-based learning .................................................................................. 50
   Mark Freeman, Susan McGrath-Champ, Steve Clark and Lucy Taylor, The University of Sydney

*Enhancing learning and measuring learning outcomes in mathematics using online assessment ....................... 56
   Layna Groen, University of Technology, Sydney

*Peer assessment: is it fair? .............................................................................................................................. 62
   Nicole Herbert, University of Tasmania

*Computer-aided assessment in mathematical sciences .................................................................................. 69
   Grant Keady, The University of Western Australia, Gary Fitz-Gerald, RMIT University, Greg Gamble, Curtin
   University of Technology and Chris Sangwin, University of Birmingham, England

*Diverse assessment methods in group work settings .................................................................................. 74
   Tim Langrish and Howard See, The University of Sydney

*Driving learning via criterion-referenced assessment using Bloom's Taxonomy ............................................. 80
   Raymond Lister, University of Technology, Sydney

*An application of student learner profiling: comparison of students in different degree programs .................. 89
   Elizabeth May, Charlotte Taylor, Mary Peat, Anne M. Barko and Rosanne Quinnell, The University of Sydney

*Reflective journals and critical thinking ....................................................................................................... 97
   Michael Paton, The University of Sydney

*Teaching applied statistics courses using computer laboratory final examinations ....................................... 101
   Tania Prvan and Margaret Mackisack, Macquarie University

*Multi-dictionary with word sense disambiguation system architecture ....................................................... 107
   Numtip Rattanawongchaitiya and Kanlaya Naruedomkul, Mahidol University, Thailand and Nick Cercone, Dalhousie
   University, Canada

*The ACELL project: Student participation, professional development, and improving laboratory learning .......... 113
Assessment for learning and motivation .................................................................120
Pauline M. Ross, Susan L. Siegenthaler and Deidre A. Tronson, University of Western Sydney

Changing assessment practices. Planning and evaluating the impact of innovations on students’ experiences of assessment ........................................................126
Rosanne Taylor, The University of Sydney

Developing a prototype conceptual survey in fundamental quantum physics ...........................................................133
Sura Wuttiprom, Institute for Innovation and Development of Learning Process, Ratchapak Chitaree and Chernchok Soankwan, Mahidol University, Thailand, Manjula Sharma and Ian Johnston, The University of Sydney

Science and engineering students’ beliefs about plagiarism: ‘It’s only an assignment’ ........................................139
Shelley Yeo, Curtin University of Technology

Testing the personalisation hypothesis in pre-laboratory e-learning environments ..............................................146
Alexandra Yeung, Adrian George, Siegbert Schmid and Michael King, The University of Sydney

It’s all foreign to me: learning through the language of genetics and molecular biology ....................................153
Felicia Zhang and Brett A. Lidbury, University of Canberra

Assessment design for teaching of personal and team interaction skills .................................................................160
G.K. Ellem and G.R. MacFarlane, The University of Newcastle

Poster Presentations
Feedback assessment of Science report writing for first year Genetics students .......................................................161
Tania Blanksby and Chee Kai Chan, La Trobe University

A new approach to assignments and examinations in mathematics courses ..........................................................165
David Easdown, The University of Sydney

*LabRAT – An electronic mark recording system for large laboratory classes .......................................................169
N.J. Ekins-Daukes and J.W. O’Byrne, School of Physics, The University of Sydney

*Flexible resources for flexible courses: are these really helping students perform in an assessment-driven learning environment? ........................................................174
R.J. Kewley, Charles Sturt University

Should lectures be compulsory? ..................................................................................178
Peter Lockwood and Chris Guppy and Robyn Smyth, The University of New England

*Peer assessment in large group projects: forming professional attitudes in IT students ....................................182
Richard Raban and Andrew Litchfield, University of Technology, Sydney

Delivering first year physics assignments with limited Resources – An Australian three-centre study ..................187
Jurgen Schulte, University of Technology, Sydney

Surveying Thai and Sydney introductory physics students’ understandings of heat and temperature ..................190
Choksin Tanahoung, Ratchapak Chitaree and Chernchok Soankwan, Mahidol University, and Manjula Sharma and Ian Johnston, The University of Sydney

A generic approach for Science ......................................................................................195
Brian Yates, School of Chemistry, University of Tasmania

Modes of assessing a student’s performance in statistical subjects: a brief look at the pro’s and con’s ...................199
Eric J. Beh, University of Western Sydney and Shelton Peiris, The University of Sydney
Design of an enquiry-based ‘Practical Only’ course for the teaching of basic skills in first year Biology .......... 199
   G.K. Ellem, R.H. Dunstan, R.J. Tayler, E.A. McLaughlin, B. Nixon, J.W. Patrick , C.E. Offler and G.R. MacFarlane,
   The University of Newcastle

Creativity in mathematics assessment ............................................................................................................. 199
   Stephen Godfrey, Gina Carmody and Leigh Wood, University of Technology, Sydney

Teaching coloured perception to Thai students by inquiry ................................................................................ 200
   Suchai Nopparatjamjomras, Ratchapak Chitaree and Chernchok Soankwan, Mahidol University

On the notion of conceptual learning in undergraduate physics .................................................................... 200
   M. Radny and C.L. Waters, The University of Newcastle

Notes ................................................................................................................................................................... 201

Pearson Education Australia was a proud sponsor of this UniServe Science symposium. Pearson Education supports
UniServe Science’s aim to promote the use of technology in science teaching and learning.
